

Broyhill's new Chemical Containment Flex Berms allow users to drive vehicles and other equipment onto them, while a lip re-expands to catch any chemical spills from the equipment. Users can set up the containment berms in one minute, the company says, adding that they're collapsible and easy to fold after use for carrying and storage. **Ideal for a temporary wash-down station for sprayers or vehicles, the berms feature memory foam walls and a membrane floor.** The berms are available as a round, 2-foot-diameter unit for small projects like oil changes or refilling chemical tanks, and an 8-foot-by-14-foot berm that can accommodate an entire vehicle so that all leaks are contained. Contact Broyhill, 800-228-1003, ext. 34 (www.broyhill.com).

The Groundsmaster 4500 and 4700 from **The Toro Co.** now include an auto-reversing engine cooling system that briefly reverses the fan to blow debris off the air intake screen. Also new to the machines is a 58-hp Kubota turbo-diesel engine, an integrated control hub with fingertip electronic controls, hood with top air-intake and a four-way adjustable seat with air-ride suspension. The mowers will still feature free-floating Contour Plus cutting units plus rear rollers on the decks to provide striping effects while mowing. Contact The Toro Co., 800-803-8676 (www.toro.com).

Jacobsen recently unveiled a new Web site with more training videos

and safety information plus a new frequently-asked-questions section with a search function. Visitors to the redesigned site can request price quotes and equipment demonstrations through links on each product page. With all product information now centrally located, users can easily access specifications, manuals, recommended parts lists, product articles and all available training videos, the company says. Regionalized to offer market-specific information, the site also features a database-driven design, which automatically updates technical information, giving visitors the latest information. Contact Jacobsen, 888-922-8873 (www.jacobsen.com).

Two herbicides from **BASF Turf & Ornamentals** — FreeHand 1.75G and Drive XLR8 — have received full state registration in California, the company announces. Labeled for use in landscape and ornamental maintained areas, FreeHand 1.75G herbicide

combines a granular formulation of dimethenamid-P with pendimethalin for pre-emergence weed control. Broad-spectrum herbicide Drive XLR8 can be applied to most tolerant cool- and warm-season grasses and features a liquid formulation of quinclorac for post-emergence control of weeds such as crabgrass, dandelions and clovers. With a use rate of 1.45 ounces per 1,000 square feet, Drive XLR8 is labeled for use on golf courses, commercial and residential turfgrasses, sod farms and sports fields. Contact BASF Turf & Ornamentals, (www.betterturf.com).

TrunkPump introduces three new pumps — a 3-inch trash version, a 2-inch trash version and a 2-inch pressure version — all available as three-point models powered by category 1 tractors. The trash pump models can handle solids up to 1.25 inches in diameter and move more than 300 gallons per minute. The pressure pump can service a small irrigation system with up to 88 psi. The company also offers a fuel savings kit, which can modify a pump to offer a reduction in fuel usage while the pump operates at peak volume, the company says. While gas-powered pumps require refueling every couple of hours, the trunk pumps can move water for a long period of time with little labor, the company adds. Contact TrunkPump, (www.trunkpump.com).

John Deere's new G series of graders offers users a choice of console-mounted controls or armrest-mounted fingertip controls, in addition to cross-slope control, automatic differential lock and a rearview camera. Models ranging from 185 to 275 net horsepower are available with a front- or mid-mount scarifier, or a rear ripper, the company says. Grade-control ready, the machines can accept Trimble or Topcon grade control systems, while all automatic grade control buttons and
